

Bays, Bows & Garden Windows

Bay and Bow windows combine the form and function of multiple window units. As shown above, this bay is configured with a central fixed picture window flanked by operable casement windows. They can accent a large living space, create a focal point for the interior decorating or add a new dimension to an existing room. Bay or bow windows are ideal for replacing large cumbersome sliding window units or picture windows. The additional glass surface creates a warm ambiance of light and visibility. Operating systems within the unit increase ventilation while fixed lite units allow for maximum daylight. Bay and bow window units are manufactured in a multitude of styles and layouts to augment both a home's interior and exterior design.

Whether choosing the clean, crisp simplicity of clear glass casements and double hung or the traditional warmth afforded by internal grids, Bay/Bow windows make a statement of sophistication and style. They enlarge any room without prolonged and expensive remodeling. Choose from 7 interior finishes and 6 exterior colors to compliment your decor. Open your home to watch the seasons change through a beautiful Bay or Bow window.
